Project: Working with a Mock Client

UDACITY

Part 1

Project

Sample Project :
Web Development

Web application development support needed for healthcare application.

Posted 2 hours ago

Hourly: $35.00 - $65.00 Based on experience.
Project Time: 3 months, 25 hours a week.

Project Description:

We are a web development company working with a healthcare client looking to connect patients directly with their doctors. We need someone to be able to take PSD mockup files from our designer and convert them into custom code using HTML, CSS, and JavaScript. We have not decided on which JavaScript library to use, but will be open to working with the one you're most familiar with. We have the designs for 10 pages and will need them to be completed in 3 months. We are open to working with all levels of experience, but the pay will be adjusted based on your experience.

Part 2

Expression of Interest

Expression of Interest

Write an initial expression of interest (EoI) to the client:

- Now that you've understood what the client is asking for, it's time for you to reach out to them.

- Write out an EoI message addressing their requirements as well as how you can help them.

- This message will be their first impression of how you communicate with them, so it is good to be professional.

- Please keep word limit between 200 - 300 words.

Expression of Interest (Provided)

Which Sample Project Listing did you select to respond to?

Answer:

(Web Development)

Expression of Interest:

Dear client,

I hope you are well. I am Israa Fikry Guda. I am pleased to help you make your healthcare web application. It looks like you need to convert mockup files into custom code using HTML, CSS, and JavaScript. That can be done by four main steps (Slicing - HTML Markup – Content Integration - Quality Check). As you wrote in the project description, you are open to working with a JavaScript library that I am familiar with and did not specify a library must work with to do that. So to be solved this, I will work with the jQuery library. From what I see, your web app needs to work on devices with different sizes so before conversion we should determine the layout type. We can choose the Responsive layout because these designs shift the layout of a web page to fit the screen.   I graduated from Computer Science University and I am a web developer with one year of experience with 25 clients from the US and Europe. I made more than 30 web applications using HTML, CSS, and JavaScript. I worked on different web applications with multiple companies in various fields such as healthcare, industry, and electronics. If you choose my proposal, I can deliver your project faster and production-ready without any unnecessary delays. Also, I offer post-sale support and which means I will be available to help you after the project is delivered with any issues you may face while running your web app.

   Let me know if you would like to chat.

Best regards,
